

## How to create API Keys in sendSMS.ro web platform

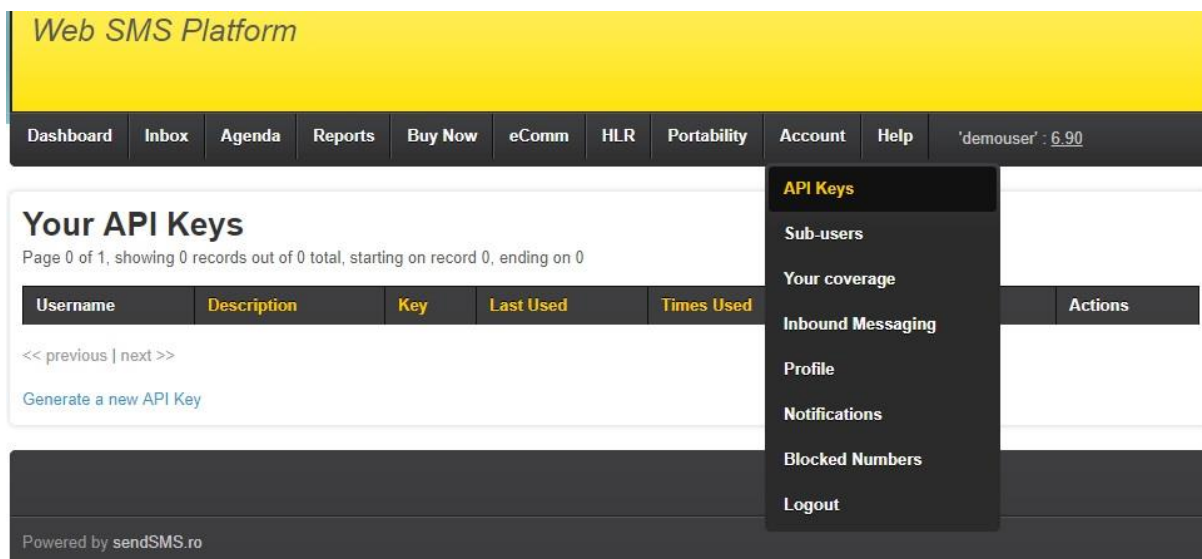

An API Key acts like a permanent password for you to connect to an API.

API connections are handled this way due to that fact that usernames and passwords may change, then instead of needing to change connection settings within the API, the Key will remain constant.

This guide will assist you in creating, viewing and deleting an API Key.

From your login screen click on the Account > API Keys - picture 1. You will then be taken to the API Key page. From this page hold you mouse over Generate a new API Key as pictured 2 and click on the selected option.

Picture 1

The screenshot shows the 'Web SMS Platform' interface. At the top is a yellow header with the text 'Web SMS Platform'. Below it is a dark navigation bar with links: Dashboard, Inbox, Agenda, Reports, Buy Now, eComm, HLR, Portability, Account, Help, and a user profile 'demouser' with a balance of 6.90. The main content area is titled 'Your API Keys' and shows 'Page 0 of 1, showing 0 records out of 0 total, starting on record 0, ending on 0'. There is a table with columns: Username, Description, Key, Last Used, Times Used, and Actions. Below the table are navigation links '<< previous | next >>' and a link 'Generate a new API Key'. A dark dropdown menu is open over the 'Account' link, listing: API Keys, Sub-users, Your coverage, Inbound Messaging, Profile, Notifications, Blocked Numbers, and Logout. The footer says 'Powered by sendSMS.ro'.
